- Platform Engineering
- Data & Data Mesh Solutions
- Digital Transformation

What does it take to move
towards acquiring a half decent
data mesh solution these days?

What does it take to move
towards acquiring a half decent
data mesh solution these days?

Especially when you feel you are
starting with a data mess

| Agenda

1. What is data mesh?
2. Considerations for the journey
3. Tracing a journey from mess → mesh
4. Evolutionary considerations 
5. Conclusion

1

What Is Data Mesh?

What Is Data Mesh?

A decentralized sociotechnical approach to share, access, and manage analytical data in complex and large-scale environments - within or across organizations.

Zhamak Dehghani -

Data Mesh: Delivering Data-Driven Value at Scale

What Is Data Mesh?

New paradigm & way of operating created to address challenges faced by large orgs trying to gain data driven insights from data at scale

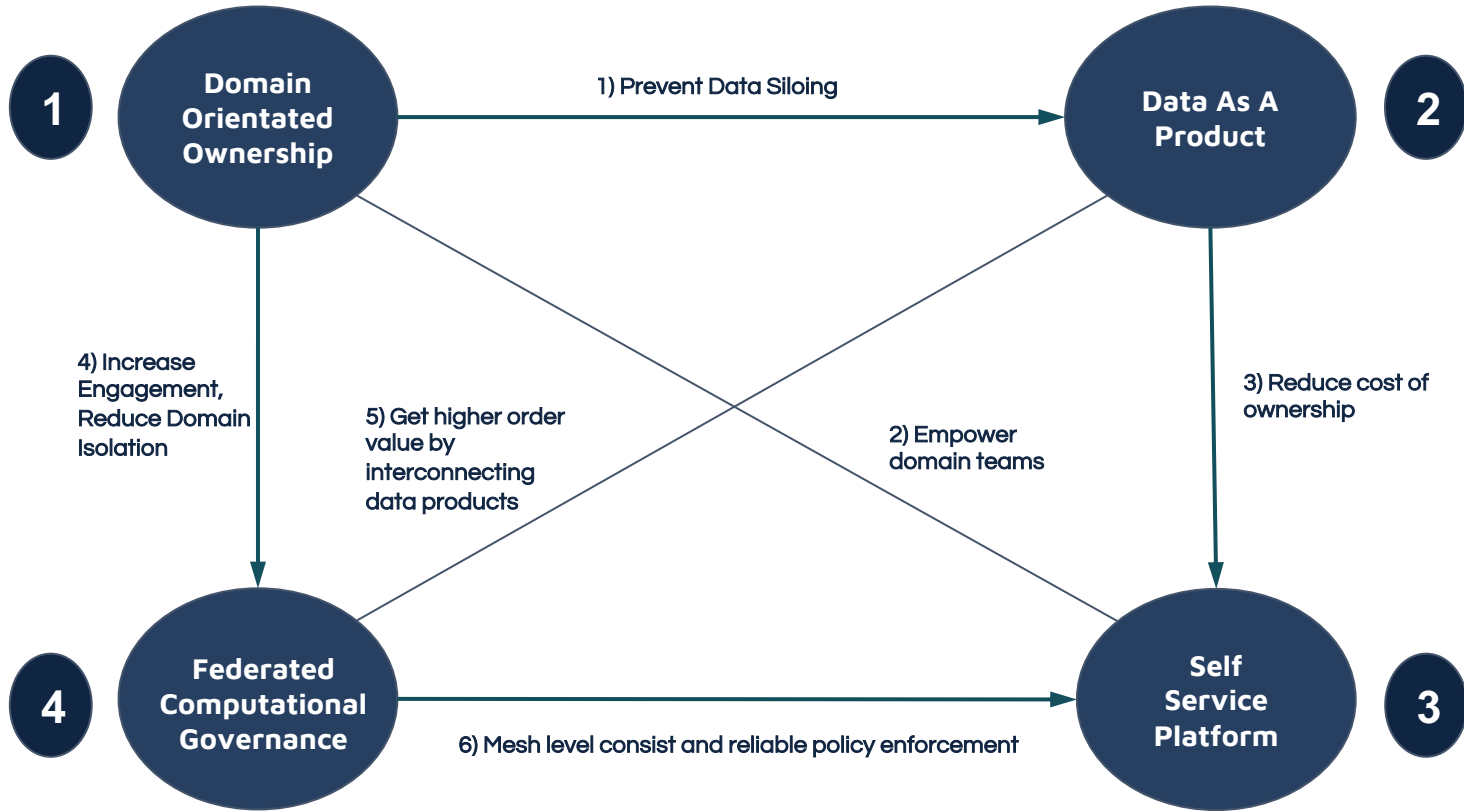

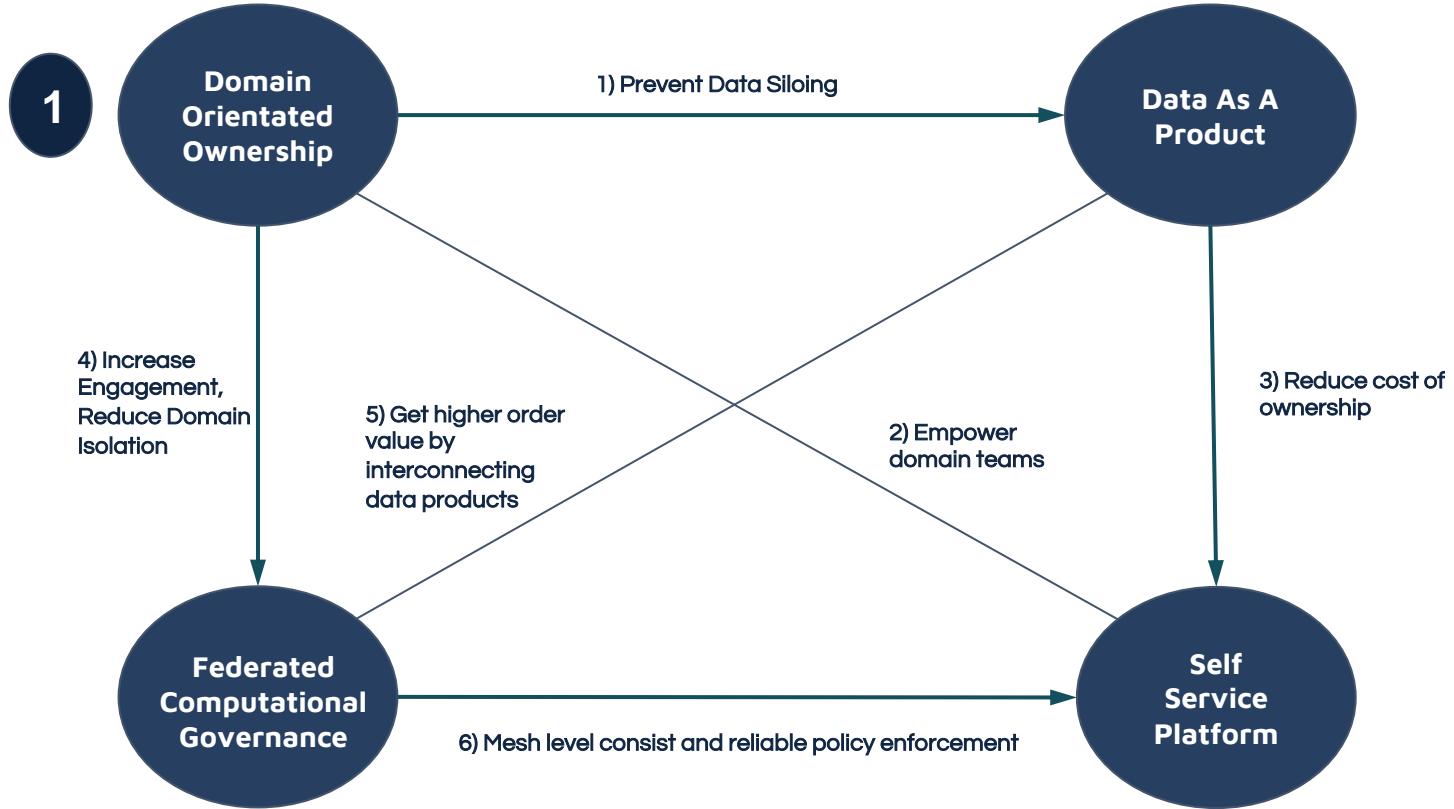

Why would I want one?

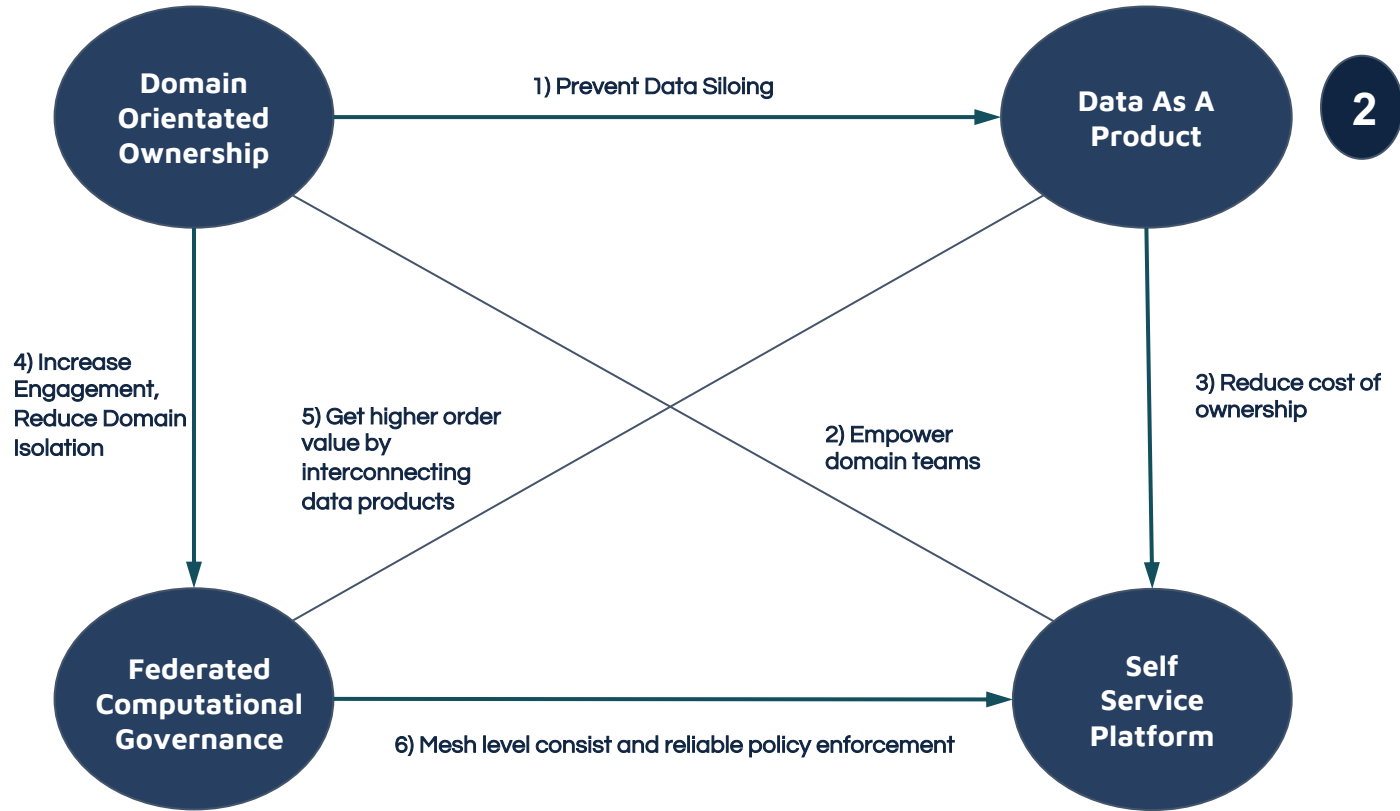

Key Objectives

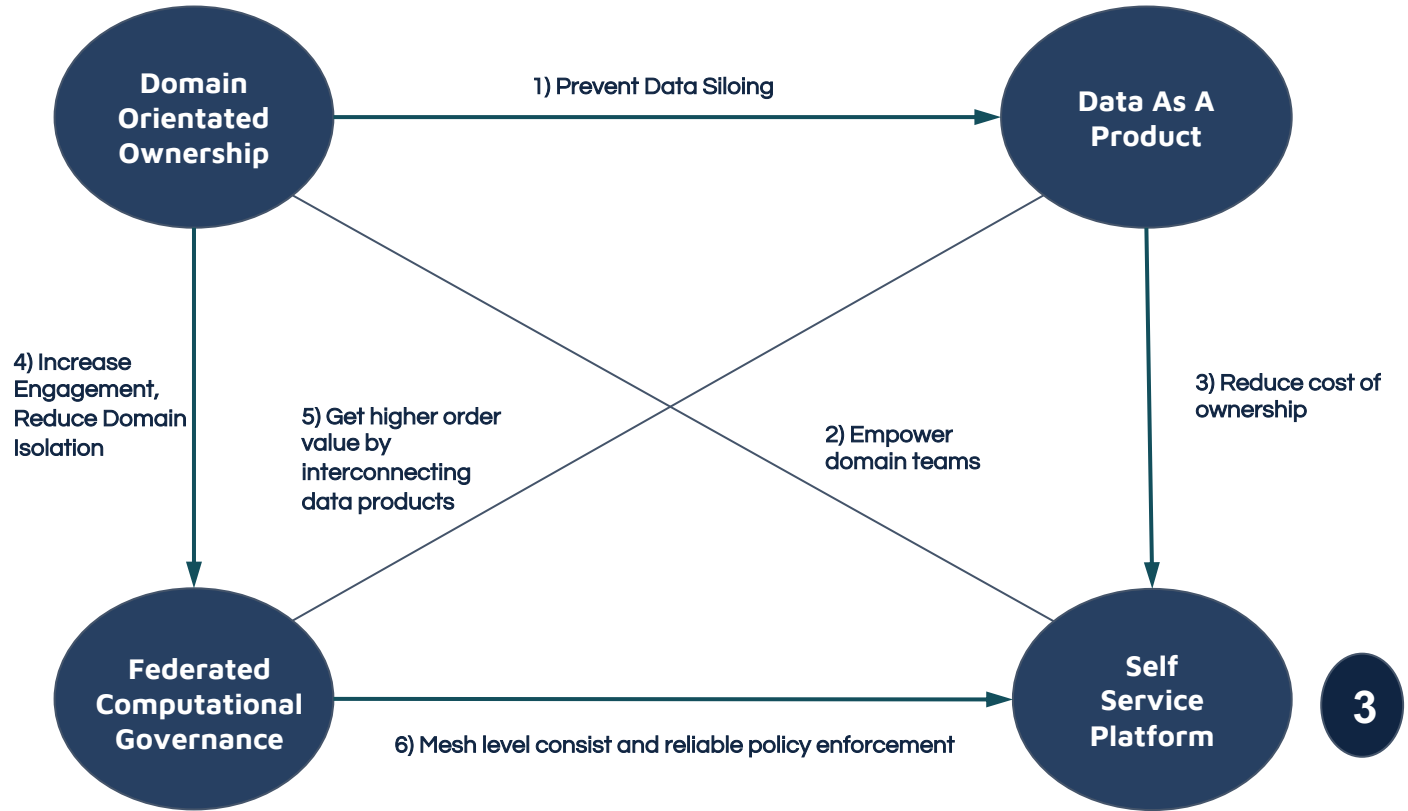

- ❑ Deal well with change and business complexity
- ❑ Remain agile especially when growing quickly
- ❑ Get better value from your data investment

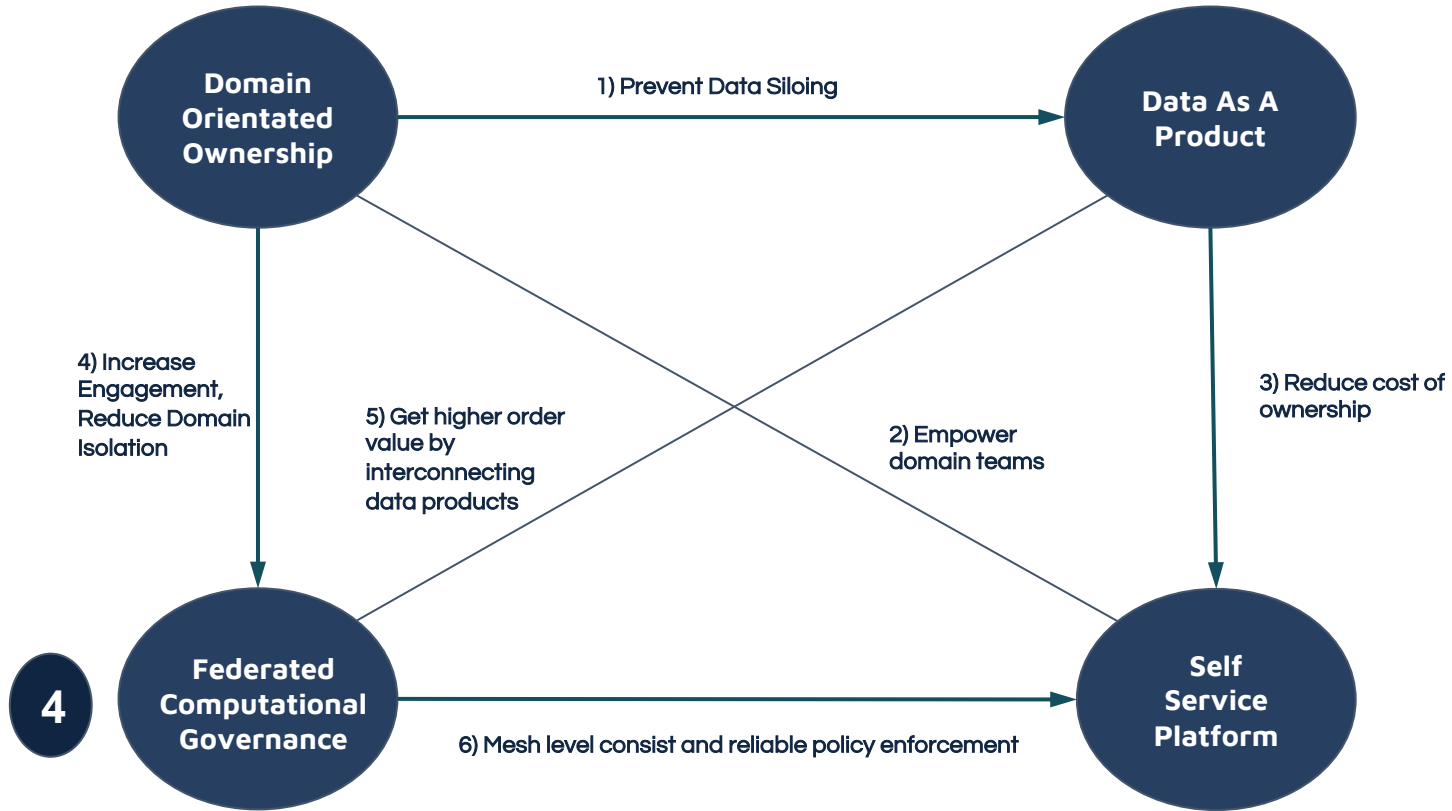

2

Considerations On The Path To The Mesh

What does it take to move
towards acquiring a half decent
data mesh solution these days?

Especially when you feel you are
starting with a data mess

1. Recognise the reality of your situation
2. Ask the right questions
3. Choose the right *approach*
(and tools) for the job

Recognise the
reality of your
situation

You are
here

But you
want to
be ...

Data
Mesh

You are
here

Reality Check #1

Existing life is not as good as it can be

But you
want to
be ...

Data
Mesh

You are
here

Data
Mesh

You are
here

Domain ownership

Data
Mesh

You are
here

Data
Mesh

You are
here

You are
here

You are
here

Domain ownership

Self serve platform

Data as a product

Federate
computational
governance

Data
Mesh

You are
here

Reality Check #2

Moving to data mesh is not a simple n-step process that fits nice and neatly on a project gantt chart

You are
here

Data
Mesh

OK ...
It's going to be a journey !!!

You are
here

OK ...
It's going to be a journey !!!

You are
here

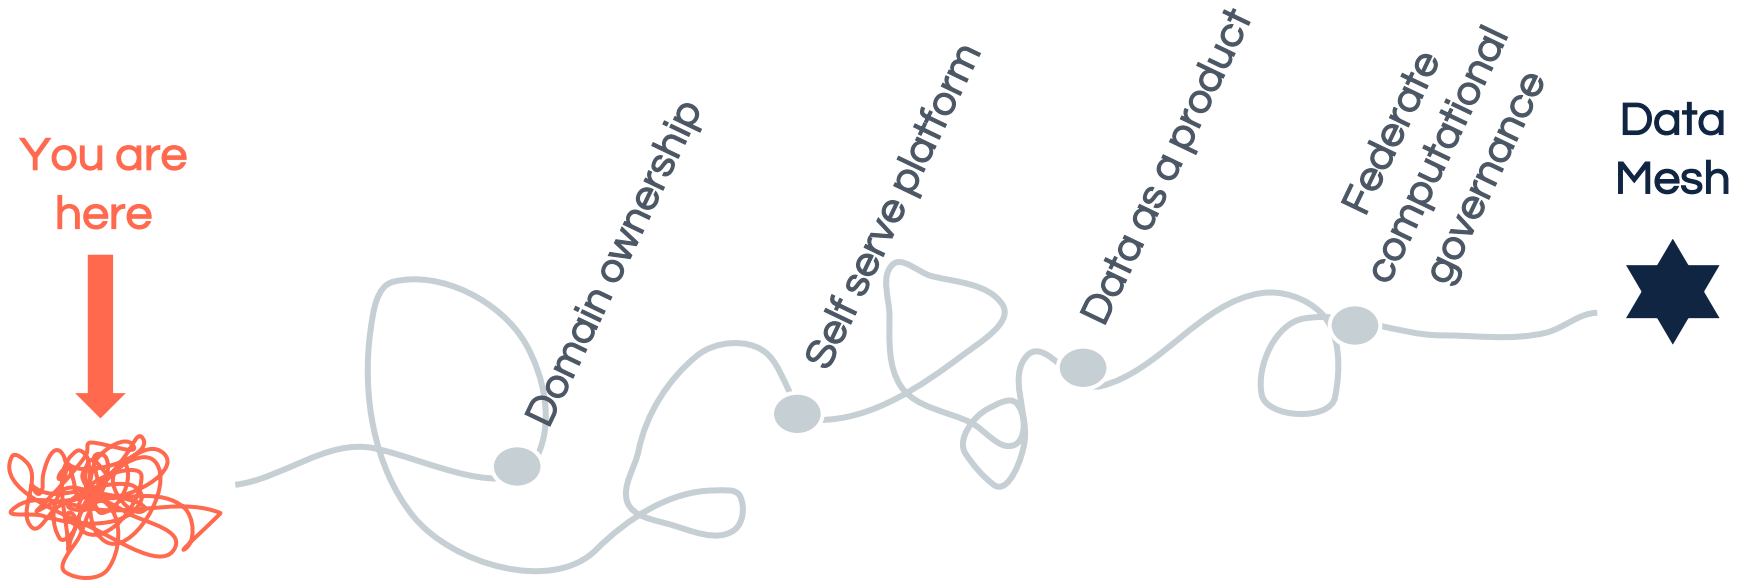

Data
Mesh

OK ...
It's going to be a journey !!!

Reality Check #3

Moving to data mesh is not a journey along a single axis

You are
here

Domain ownership

OK... It's *multiple journeys*
spanning multiple (yet
interconnected) areas ...

Self serve
platform

Data as a
product

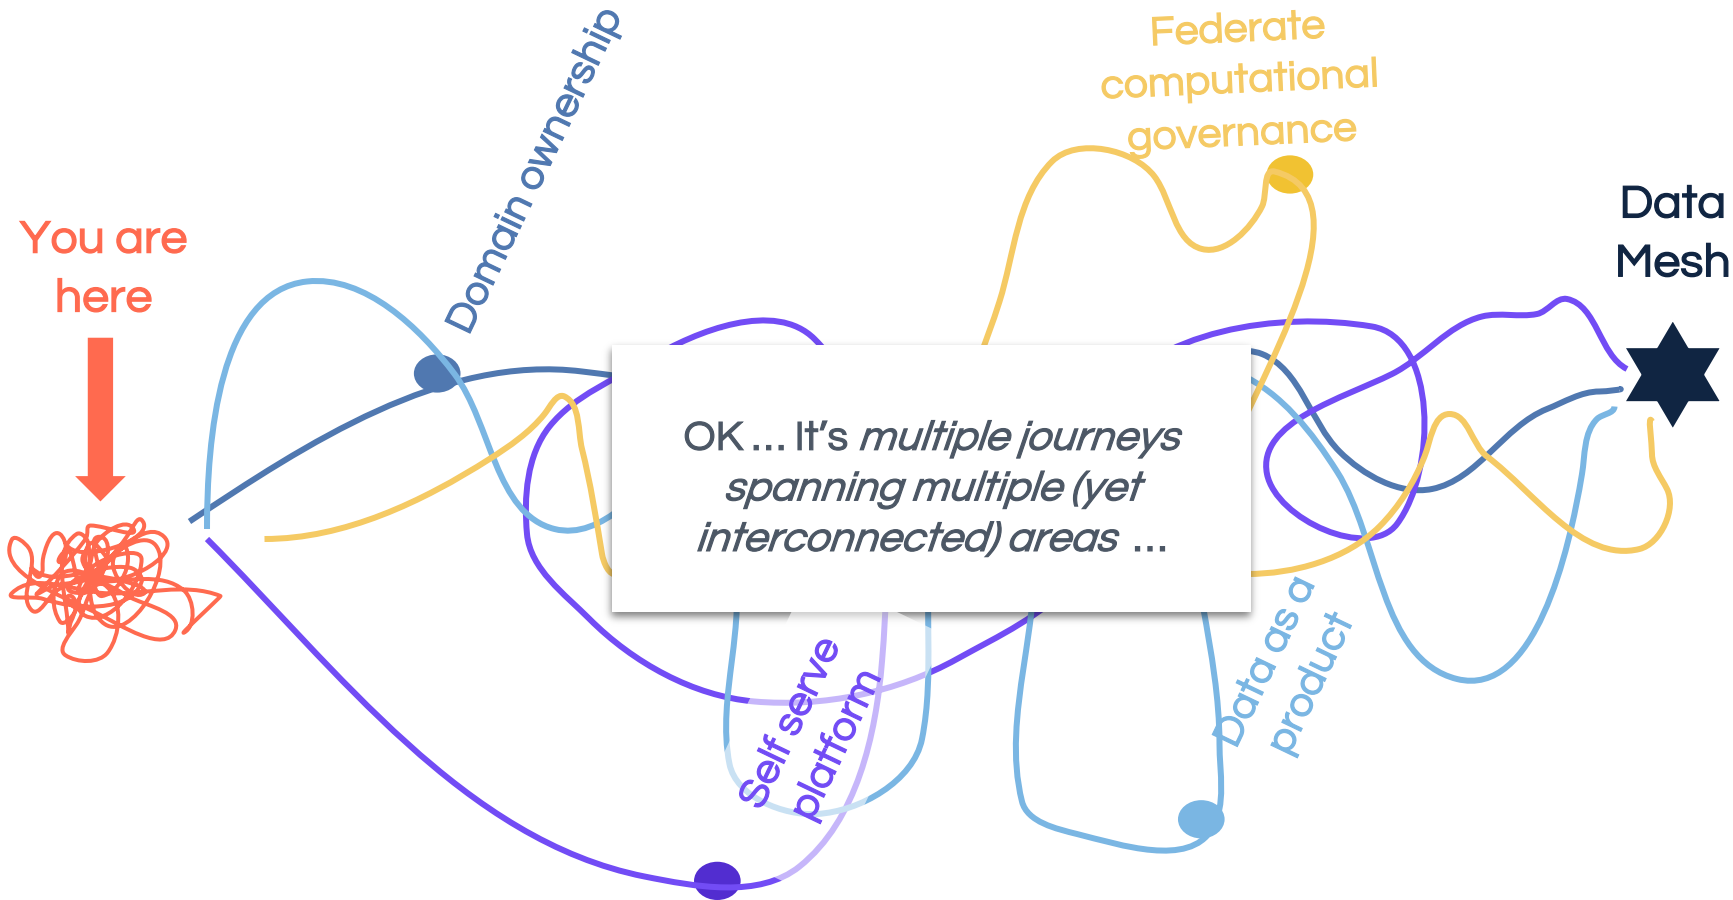

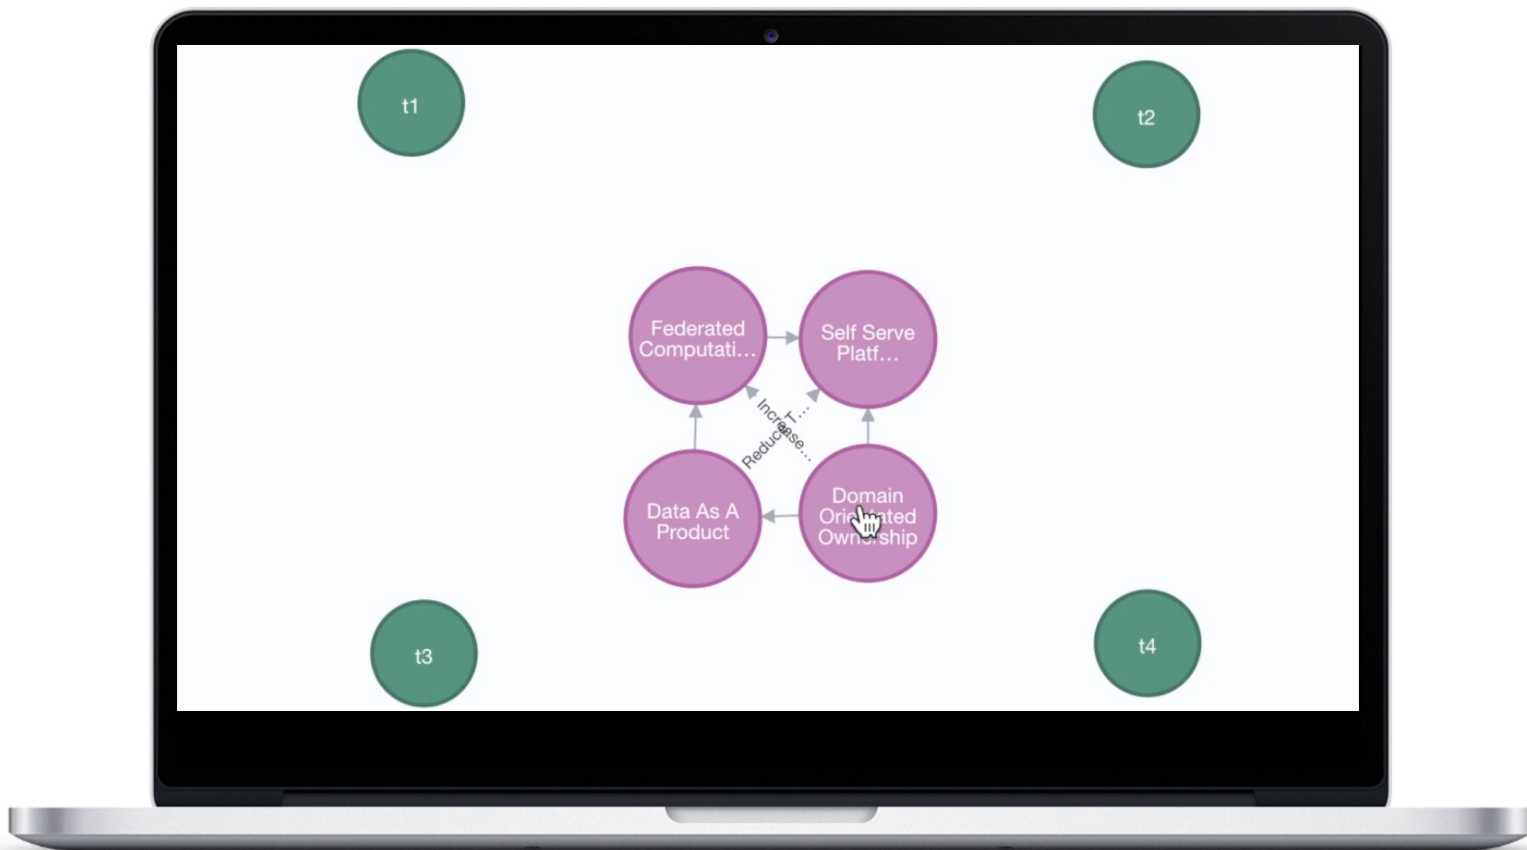

Federate
computational
governance

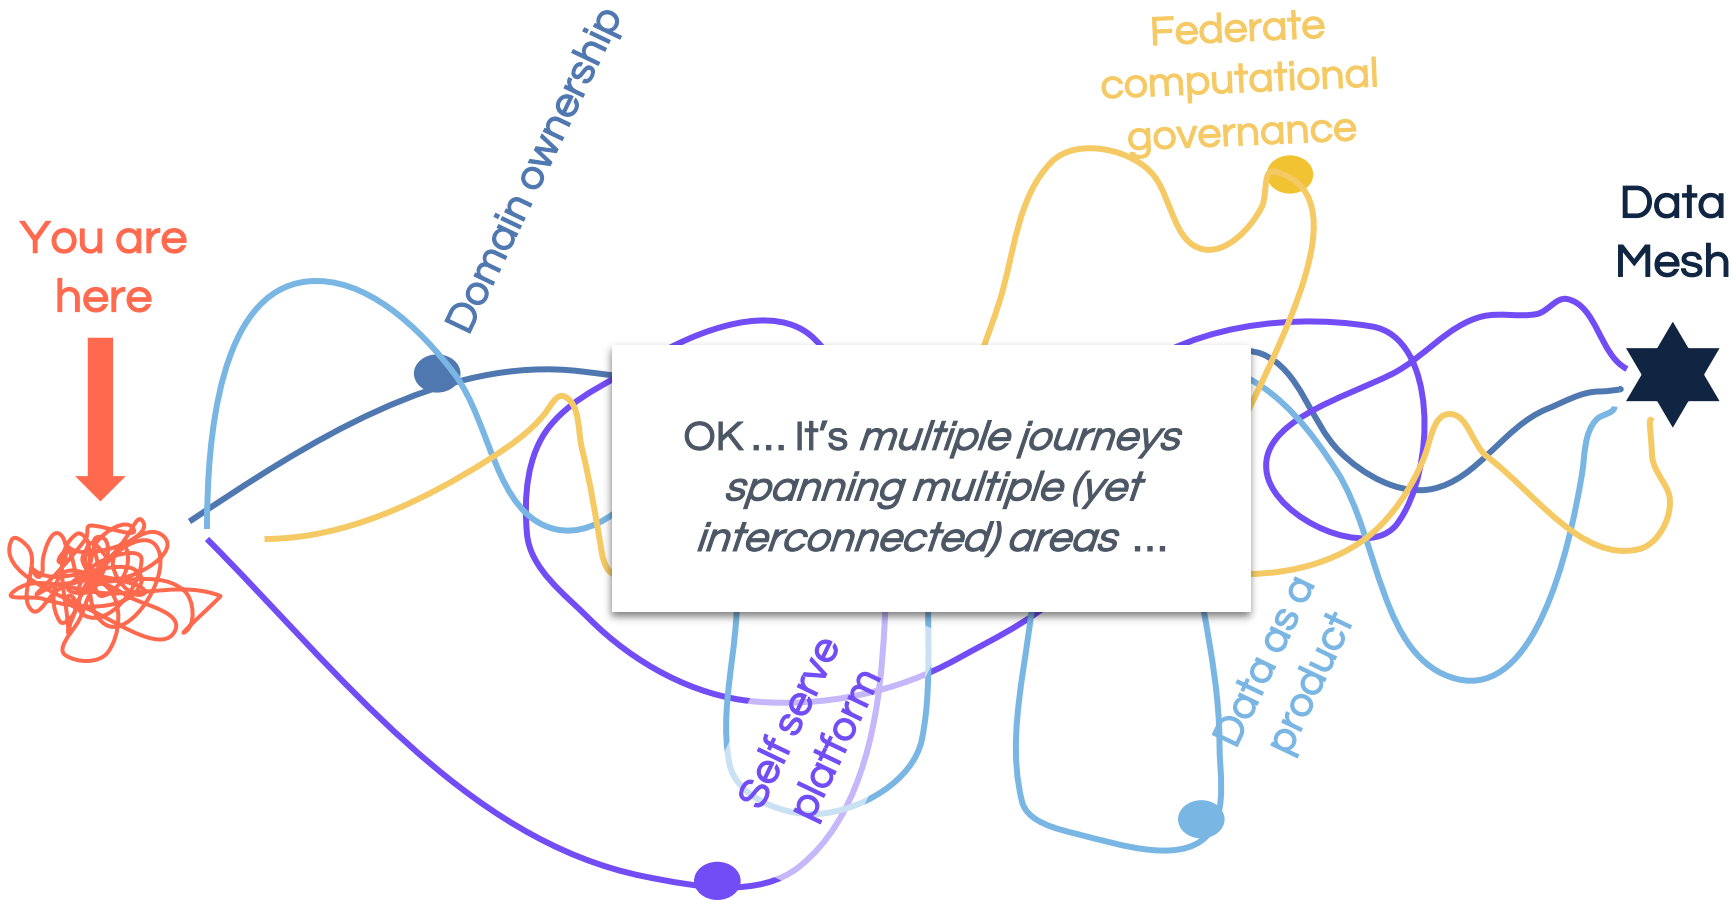

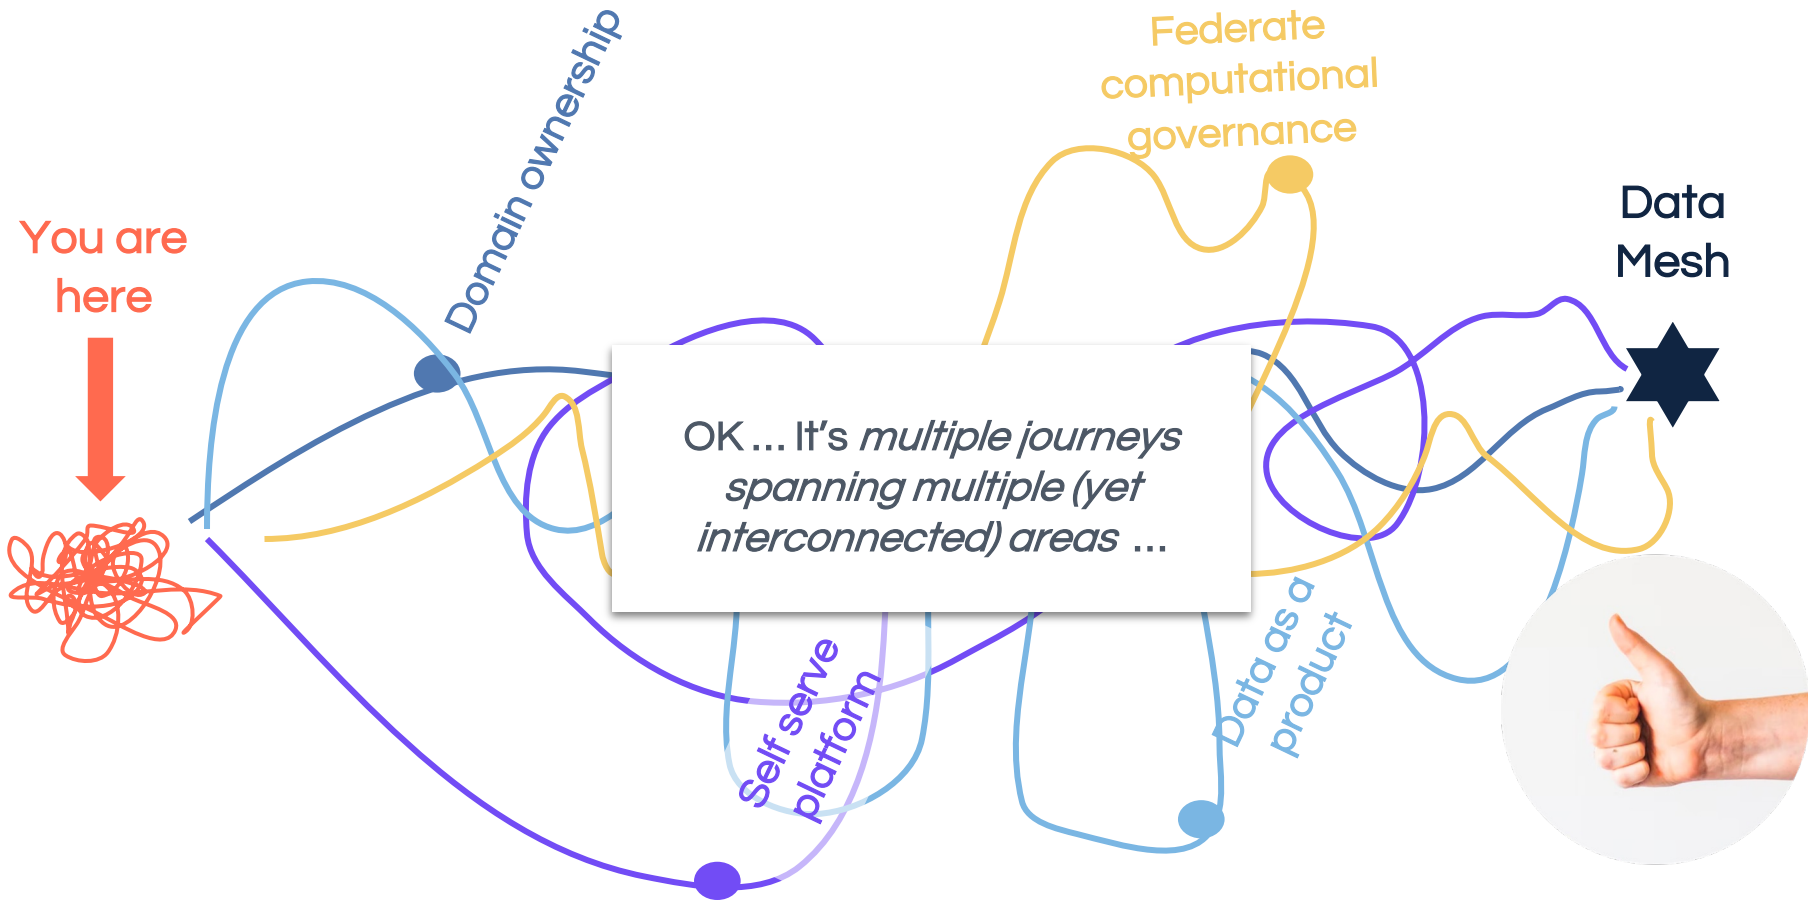

Data
Mesh

You are
here

Assumes you know
that the answer is
“Data Mesh”

Data
Mesh

But you
want to
be ...

I Have
Some
Problem!

```
graph TD; A([I Have Some Problem!]) --> B([I Need Technology X]);
```

I Have
Some
Problem!

I Need
Technology
X

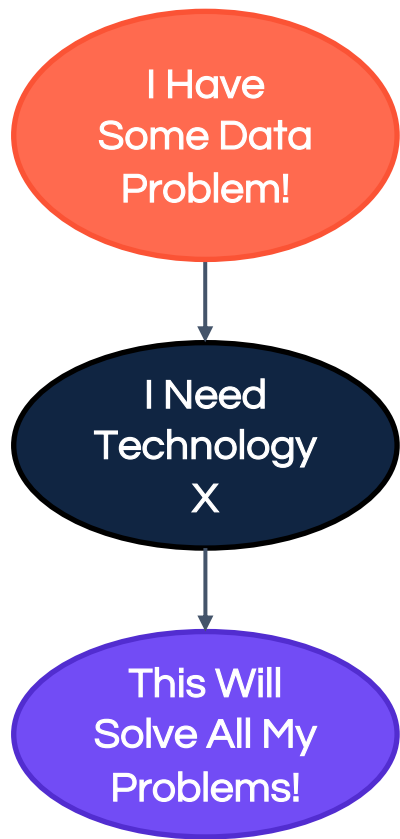

I Have
Some
Problem!

I Need
Technology
X

This Will
Solve All My
Problems!

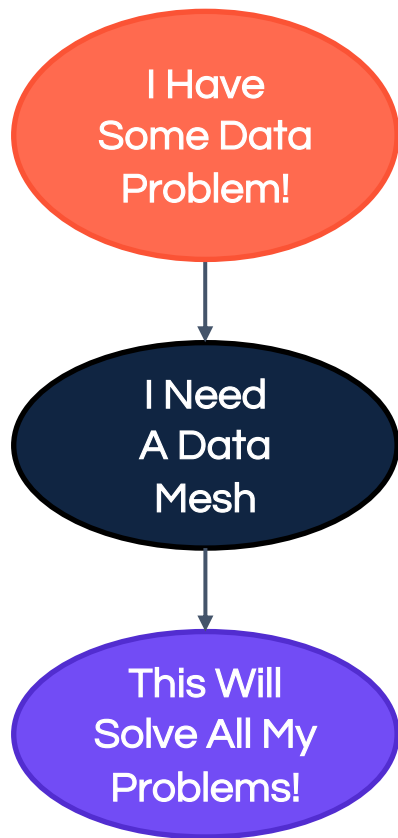

```
graph TD; A([I Have Some Data Problem!]) --> B([I Need A Data Mesh]); B --> C([This Will Solve All My Problems!]);
```

I Have
Some Data
Problem!

I Need
A Data
Mesh

This Will
Solve All My
Problems!

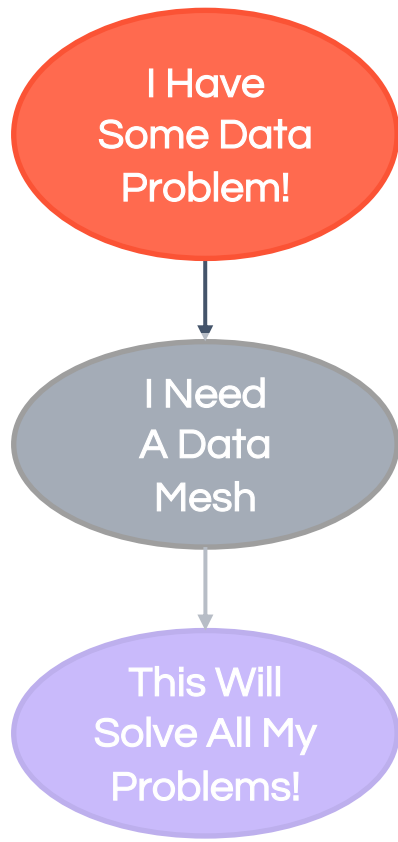

Reality Check #4

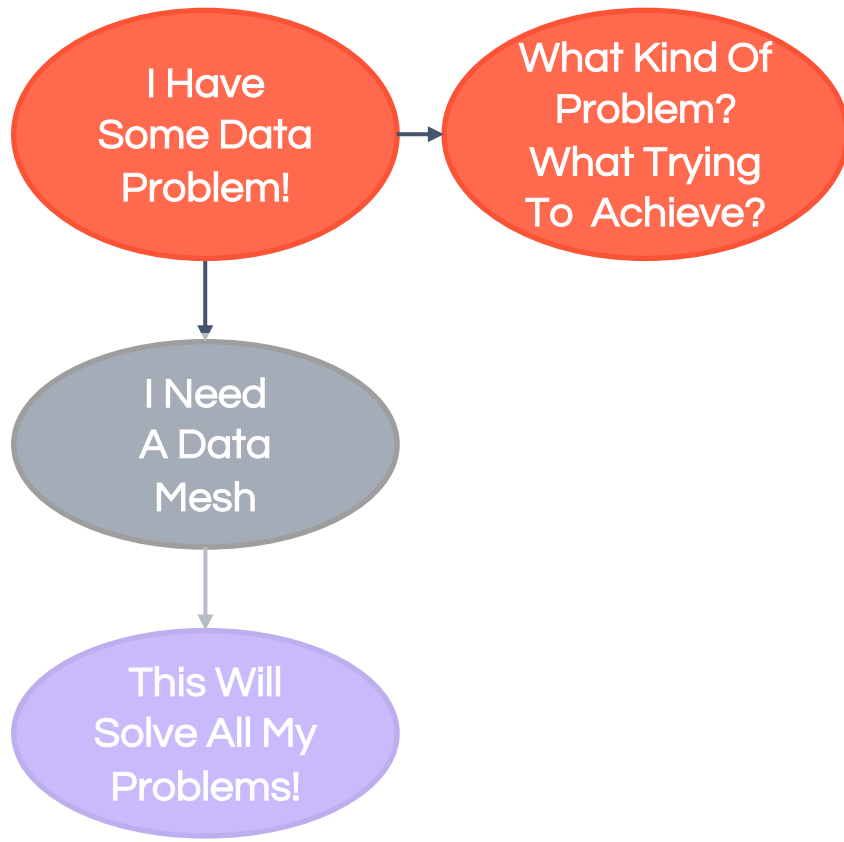

Data Mesh is not a piece of tech / platform
you can buy & install

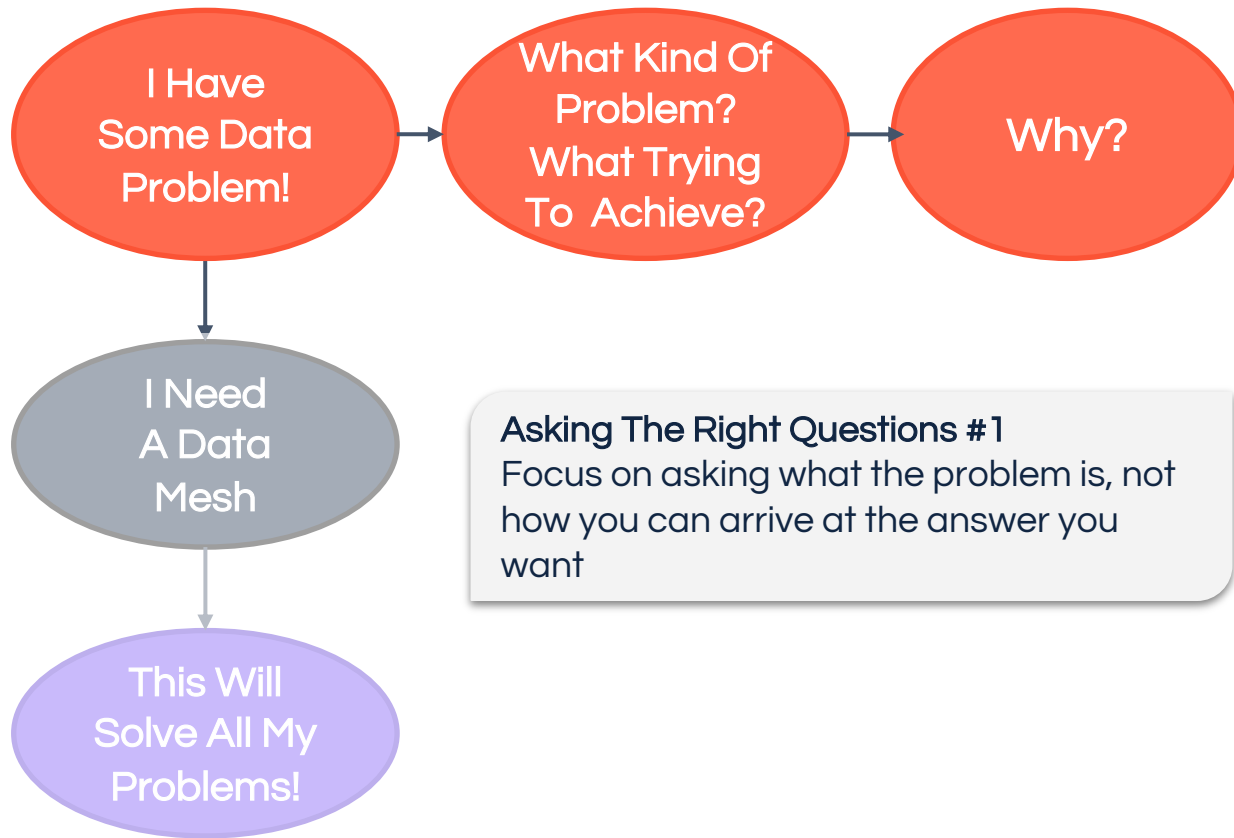

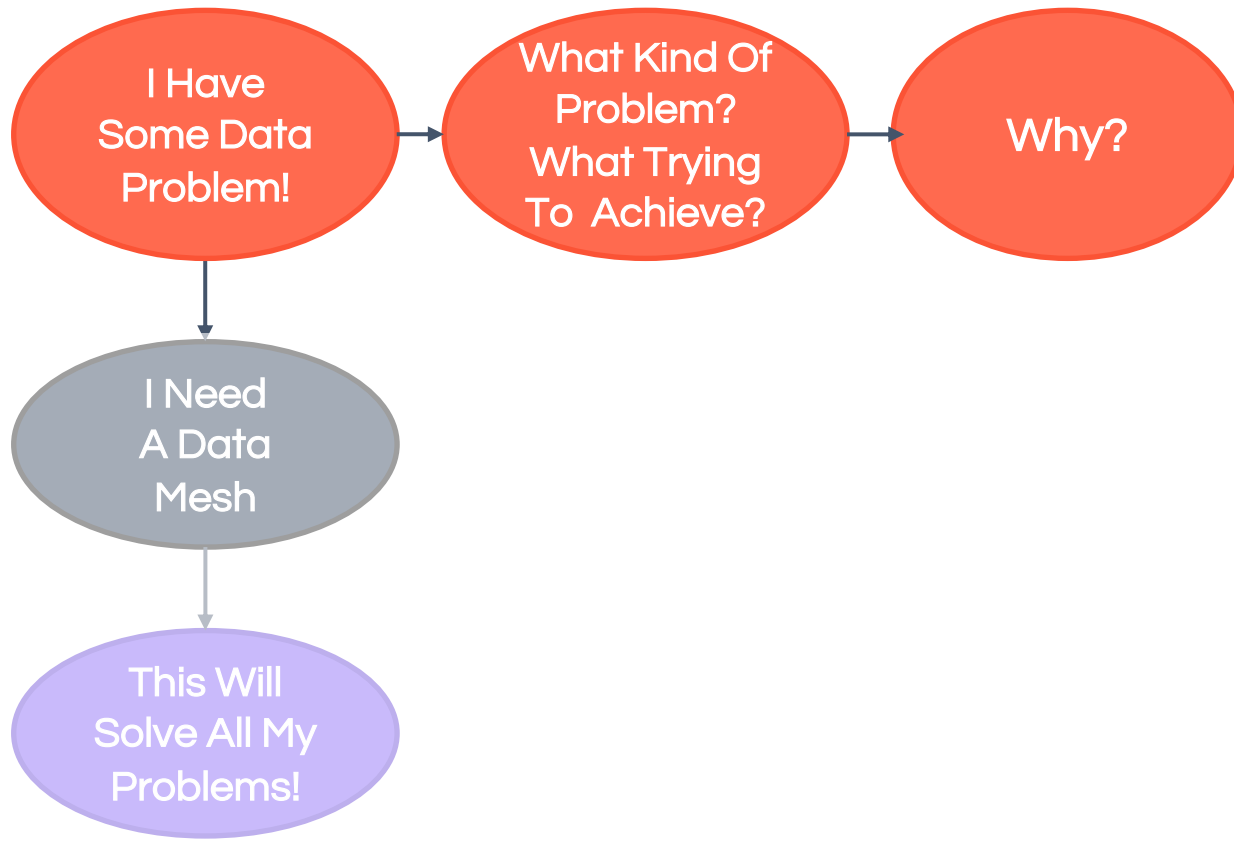

Ask the
right
questions

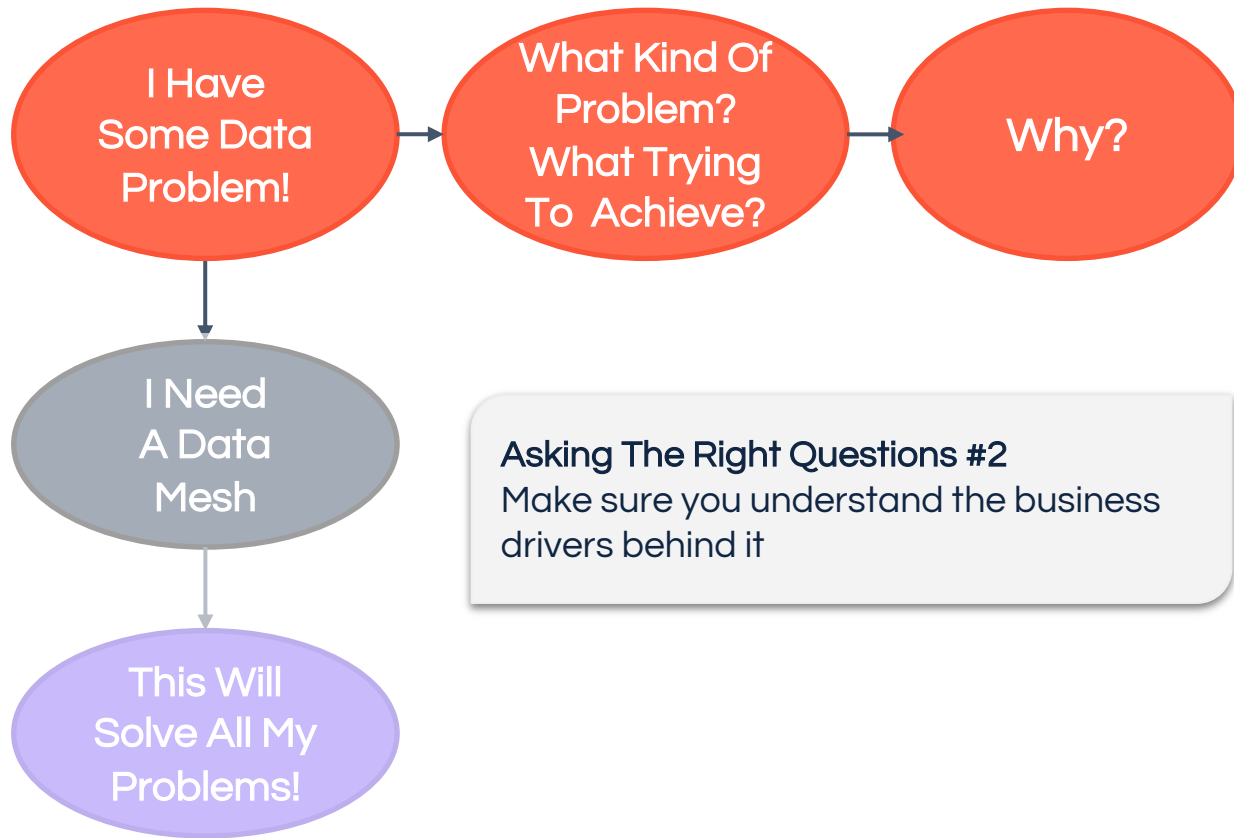

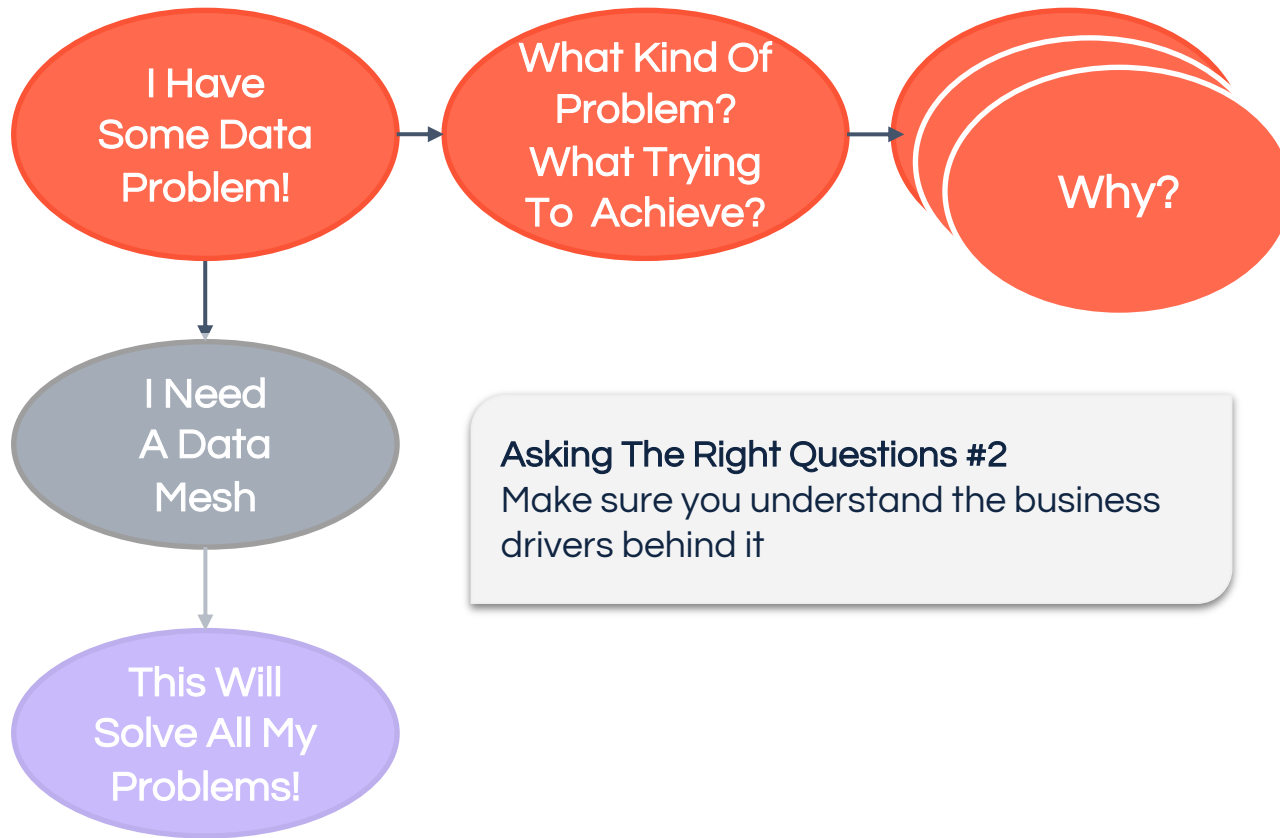

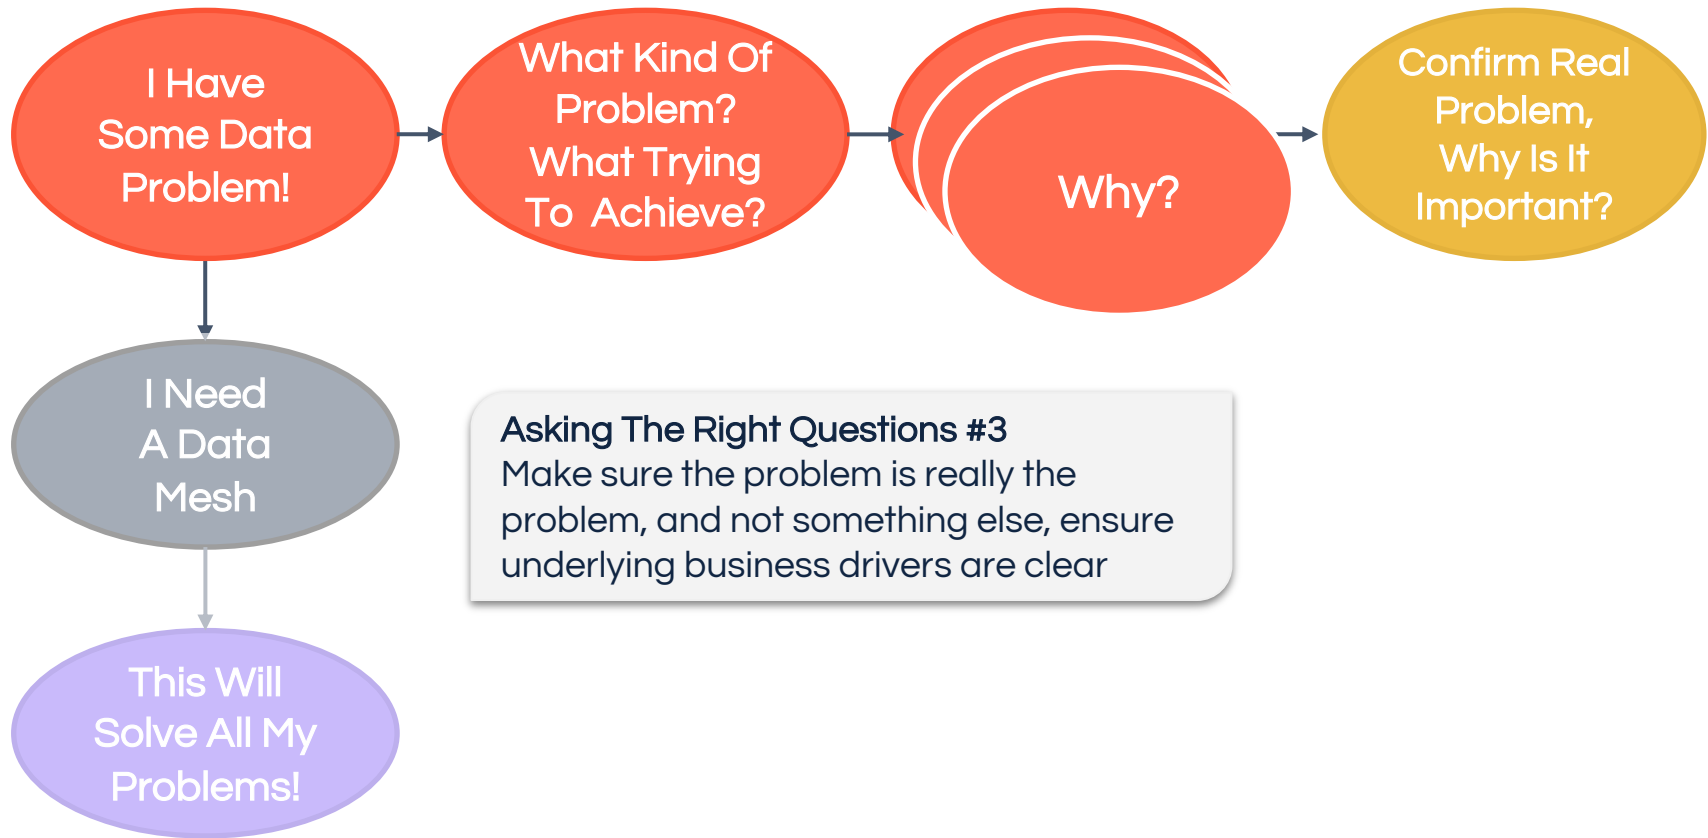

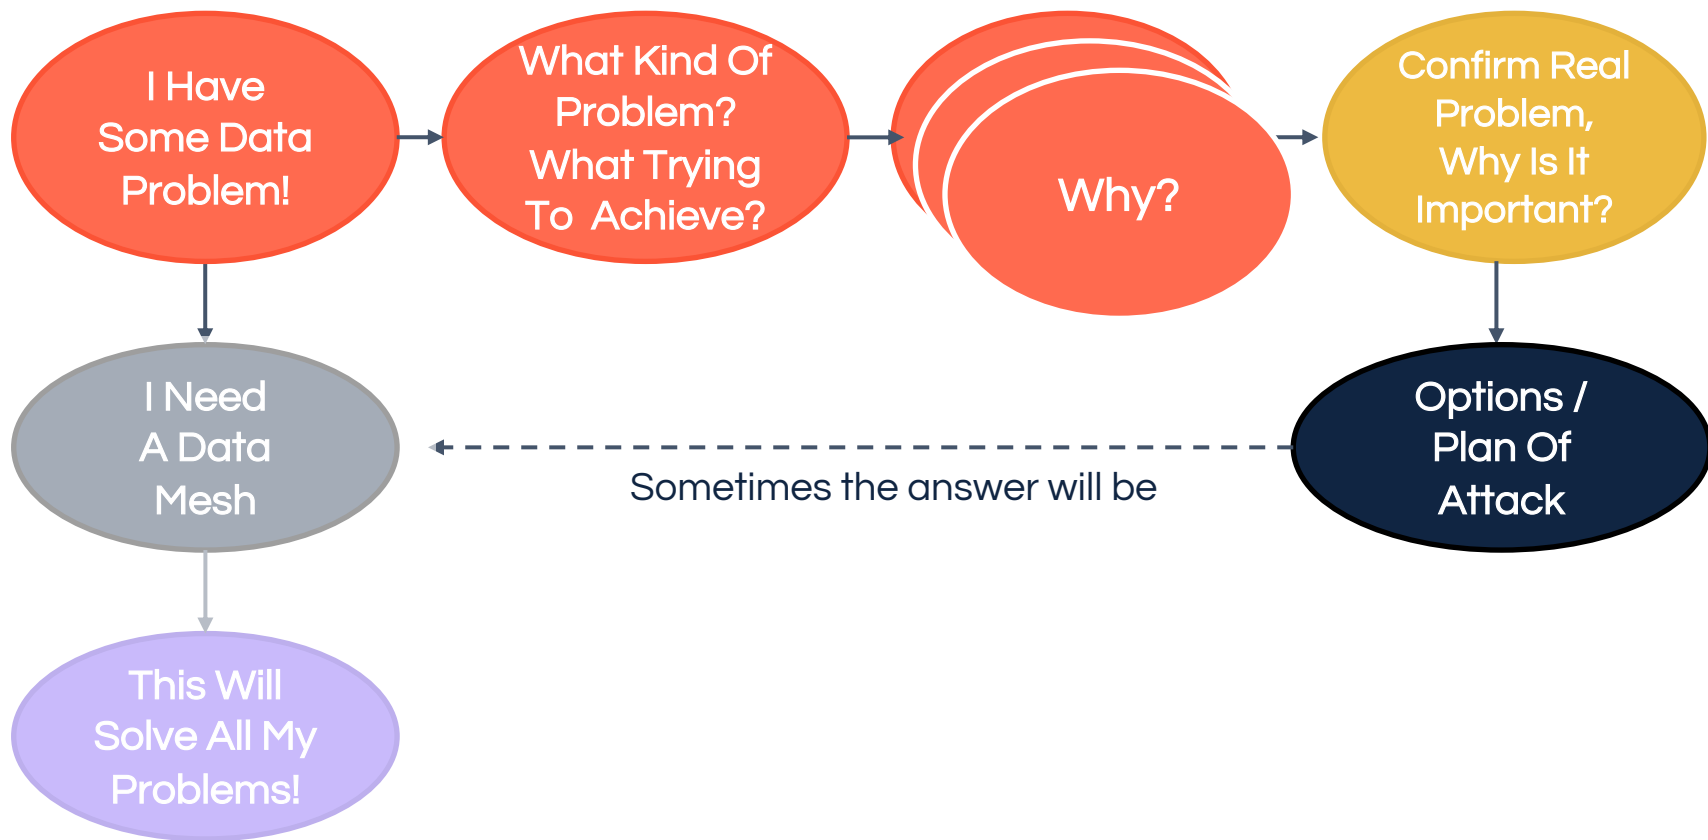

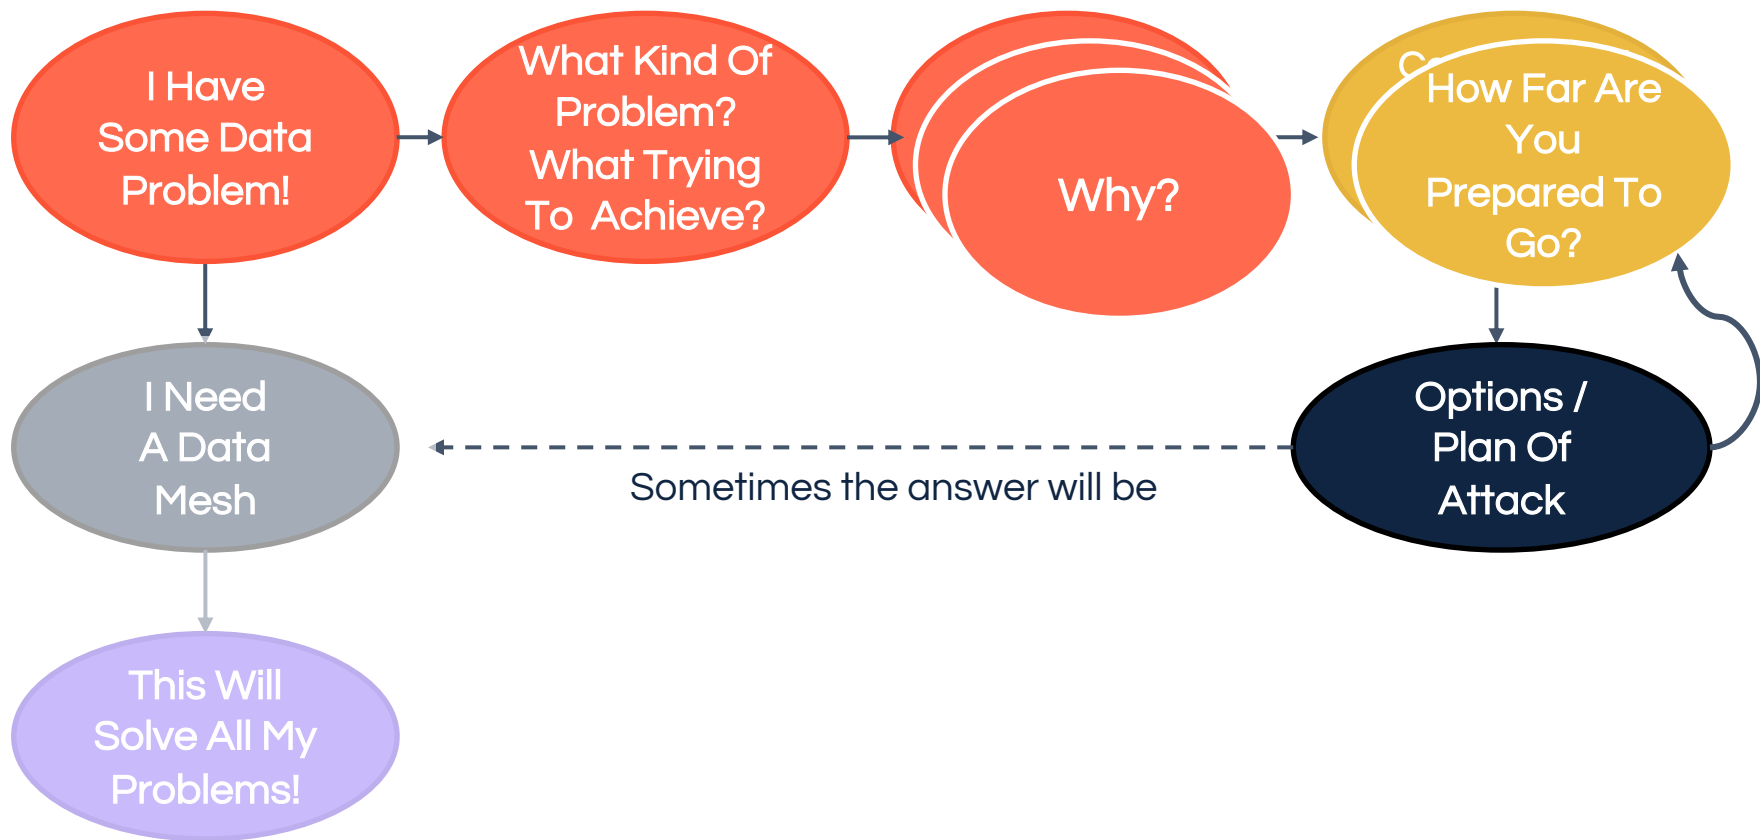

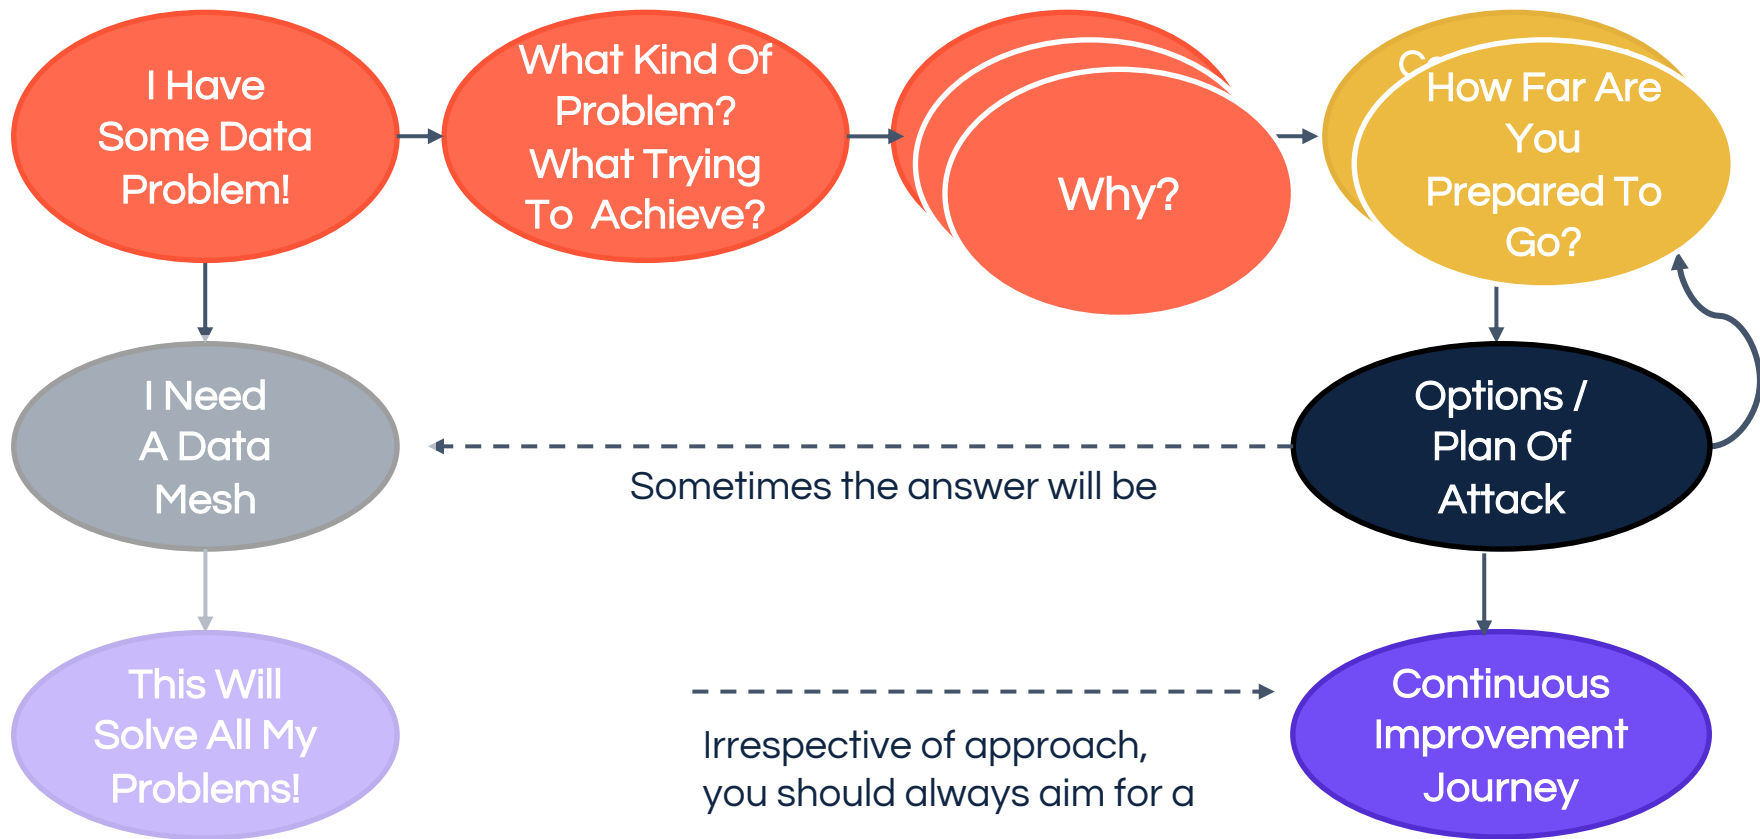

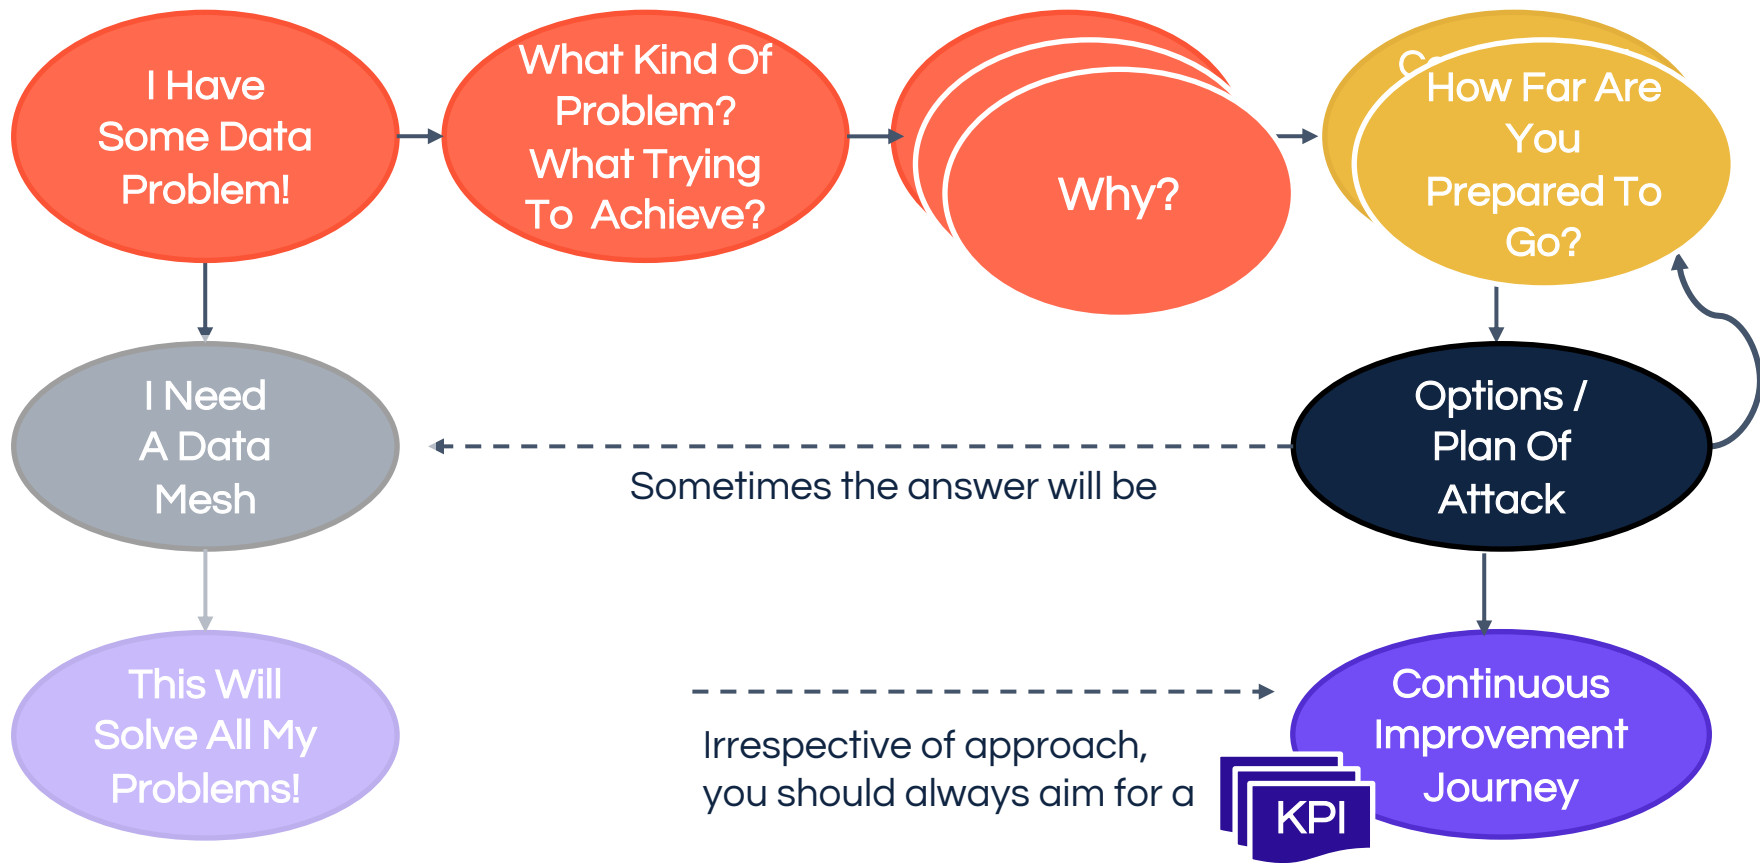

Choose
the right
approach
for the job

You are
here

Recognise
Reality of
situation

Data
Mesh

You are
here

Recognise
Reality of
situation

Ask The
Right
Questions

Data
Mesh

You are
here

Recognise
Reality of
situation

Ask The
Right
Questions

Chose
The Right
Approach
For Job

You are
here

Recognise
Reality of
situation

Ask The
Right
Questions

Chose
The Right
Approach
For Job

You are
here

| Considerations On Path To Mesh: Key Takeaways

- Recognise the reality of the situation you're in
- Ask the right questions
- Choose the right approach for the job
- Data Mesh is not the only answer!
- Data Mesh comes in many shapes & sizes

3

Tracing a journey from
mess → mesh

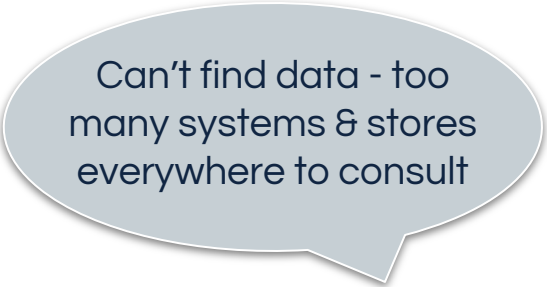

What Kind Of Problem /
What Kind Of Mess Do You Have?

| Types of Problems

As a Data Scientist / Analyst

| Types of Problems

Can't find data - too many systems & stores everywhere to consult

As a Data Scientist / Analyst

| Types of Problems

Can't find data - too many systems & stores everywhere to consult

As a Data Scientist / Analyst

Can't easily access or make sense of data in data lake (data swamp)

| Types of Problems

Can't find data - too many systems & stores everywhere to consult

As a Data Scientist / Analyst

Can't easily access or make sense of data in data lake (data swamp)

As a CTO

| Types of Problems

Can't find data - too many systems & stores everywhere to consult

As a Data Scientist / Analyst

Can't easily access or make sense of data in data lake (data swamp)

[Insight driven] projects taking too long to complete, business is losing out on opportunities

As a CTO

| Types of Problems

Can't find data - too many systems & stores everywhere to consult

As a Data Scientist / Analyst

Can't easily access or make sense of data in data lake (data swamp)

[Insight driven] projects taking too long to complete, business is losing out on opportunities

As a CTO

Overloaded data teams, not enough people to do the work

| Types of Problems

Can't find data - too many systems & stores everywhere to consult

As a Data Scientist / Analyst

Can't easily access or make sense of data in data lake (data swamp)

[Insight driven] projects taking too long to complete, business is losing out on opportunities

As a CTO

Overloaded data teams, not enough people to do the work

Need to get a better handle on where sensitive data is being used - worried we are exposing things like PII unnecessarily

| How can I solve my mess?

Can't find data - too many systems & stores everywhere to consult

As a Data Scientist / Analyst

Can't easily access or make sense of data in data lake (data swamp)

| How can I solve my mess?

I Have
Some Data
Problem!

Can't find data - too many systems & stores everywhere to consult

As a Data Scientist / Analyst

Can't easily access or make sense of data in data lake (data swamp)

| How can I solve my mess?

Can't find data - too many systems & stores everywhere to consult

As a Data Scientist / Analyst

Can't easily access or make sense of data in data lake (data swamp)

| How can I solve my mess?

Can't find data - too many systems & stores everywhere to consult

Why Is It Important To Address?

- If I can more easily find the data I need, it will be easier & faster to build my models

As a Data Scientist / Analyst

Can't easily access or make sense of data in data lake (data swamp)

| How can I solve my mess?

Can't find data - too many systems & stores everywhere to consult

As a Data Scientist / Analyst

Can't easily access or make sense of data in data lake (data swamp)

Why Is It Important To Address?

- If I can more easily find the data I need, it will be easier & faster to build my models

Why Is that Important ?

- Models are key part to how we deliver insight / value to users
- We are growing and can't afford to slow down in this area

| How can I solve my mess?

Can't find data - too many systems & stores everywhere to consult

As a Data Scientist / Analyst

Can't easily access or make sense of data in data lake (data swamp)

Why Is It Important To Address?

- If I can more easily find the data I need, it will be easier & faster to build my models

Why Is that Important ?

- Models are key part to how we deliver insight / value to users
- We are growing and can't afford to slow down in this area

Why Is that Important ?

- My boss says so ...

| How can I solve my mess?

Can't find data - too many systems & stores everywhere to consult

As a Data Scientist / Analyst

Can't easily access or make sense of data in data lake (data swamp)

Why Is It Important To Address?

- If I can more easily find the data I need, it will be easier & faster to build my models

Why Is that Important ?

- Models are key part to how we deliver insight / value to users
- We are growing and can't afford to slow down in this area

Why Is that Important ?

- Our competition is already doing this, if we don't adapt, we die!

| How can I solve my mess?

As Data scientists & analysts its difficult to find, acquire and make sense of data to build models and run reports easily - too complex, too many moving parts, too slow.

With business growing & competition increasing, continually being able to derive value from these models and feedback into product offerings will become a crucial part of the companies survival!

Data Mesh

Are You Prepared To Change where necessary:

- ❌ Team Structures
- ❌ Operating Model
- ❌ Governance Approach
- ❌ Architectural Approach

| How can I solve my mess?

Eg HR domain

- 15% reduction in rejection of candidates at 1st hire phase
- 10% improvement in retention rate for key talent
- Cost per hire remains under \$X.XX

| Tracing A Journey: Key Takeaways

- Data Mesh is not for everyone
- But even if it is, how far are you prepared to go?
- Data Mesh can require big changes to people & org
 - This can scupper many folks / organisations which are not ready or aware

4

Evolutionary Considerations

With some top tips along the way!

#1 Lay a solid foundation: start with cloud

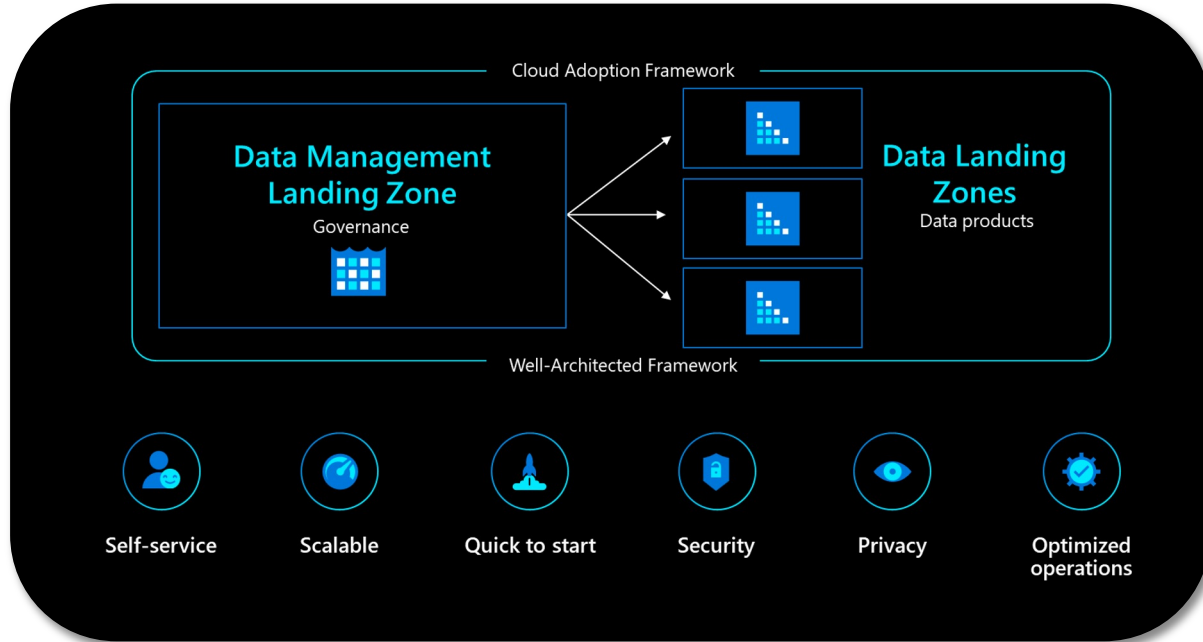

Image Credit: Microsoft Cloud Adoption Framework - Cloud Scale Analytics

<https://learn.microsoft.com/en-us/azure/cloud-adoption-framework/scenarios/cloud-scale-analytics/>

#2 Be pragmatic about decentralization

#2 Be pragmatic about decentralization

- Better ownership
- Less contention
- Easier to scale

#2 Be pragmatic about decentralization

- Large cloud bills ???
- Performance
(copying data everywhere) ???

- Better ownership
- Less contention
- Easier to scale

#2 Be pragmatic about decentralization

What is most
important to
you?

How far are
you prepared
to go?

Centralised

Decentralised

#2 Be pragmatic about decentralization

Centralised

Centralised

Decentralised

#2 Be pragmatic about decentralization

#2 Be pragmatic about decentralization

#2 Be pragmatic about decentralization

#2 Be pragmatic about decentralization

#3 Start small, learn, adapt, rinse repeat

- The Data Mesh Killer: Requiring a full re-org into domain teams up front
- Piggyback off a digital / cloud transformation
- Event Storming helpful to discover data products

#4 DIY Integration required

- Tools still immature
- You will need to a lot of work in this space

Evolutionary Considerations: Key Takeaways

- It's not all or nothing, can make progress along each principle
 - And still derive value - although may be not be fully realised

#1 Lay a solid foundation: start with cloud

#2 Be pragmatic about decentralization

#3 Start small, learn, adapt, rinse, repeat

#4 Custom “glue/integration” tooling dev still required

5

Conclusion

What does it take to move
towards acquiring a half decent
data mesh solution these days?

Especially when you feel you are
starting with a data mess

| Key Considerations On Journey

- Recognise the reality of the situation you're in
- Ask the right questions
- Choose the right approach for the job
- Data Mesh is not the only answer!
- Data Mesh comes in many shapes & sizes

| Key Considerations On Journey

Data Mesh is not the goal in and of itself, but it does *provide a path and good principles* to help guide us towards achieving our strategic objectives

| By tracing an example journey we saw ...

- Data Mesh is not for everyone
- But even if it is, how far are you prepared to go?
- Data Mesh requires big changes of people & orgs
 - This can scupper things if not ready or aware

Evolutionary Considerations

- It's not all or nothing, can make progress along each principle
 - And still derive value - although may not be fully realised

#1 Lay a solid foundation: start with cloud

#2 Be pragmatic about decentralization

#3 Start small, learn, adapt, rinse, repeat

#4 Custom “glue/integration” tooling dev still required
